4. Save all your files into your folder.

*Note : Answer all the 4 questions.*

**SECTION – I : PAGEMAKER**

**Question No. 1**

25

**Type the following passage in PageMaker ( 150 mm × 100 mm page size ) :**

10

**VIRUS**

A **computer virus** is a type of malicious software program ('malware') that, when executed, replicates by reproducing itself or infecting other computer programs by modifying them. Infecting computer programs can include data files, or 'boot' sector of the hard drive. When this replication succeeds, the affected areas are then said to be 'infected' with a computer virus. The term 'virus' is also commonly used to refer to other types of malware. 'Malware' encompasses computer viruses along with many other forms of malicious software, such as computer 'worms', ransom-ware, trojan horses, keyloggers, rootkits, spyware, adware, malicious Browser Helper Object (BHOs) and other malicious software. The majority of active malware threats are actually trojan horse programs or computer worms rather than computer viruses. The term

computer virus, coined by Fred Cohen in 1985, is a misnomer. Viruses often perform some type of harmful activity on infected host computers, such as acquisition of hard disk space or central processing unit (CPU) time, accessing private information (*e.g.*, credit card numbers), corrupting data, displaying political or humorous messages on the user's screen, spamming their e-mail contacts, logging their keystrokes, or even rendering the computer useless. However, not all viruses carry a destructive 'payload' or attempt to hide themselves — the defining characteristic of viruses is that they are self-replicating computer programs which install themselves without user consent.

**Do the following alignments :**

1. The text font must be 12 and Heading font must be 22. 2
2. Change the colour of the heading to Blue and align it to centre. 1
3. Justify all the text. 1
4. Add 3 columns and place the data in column. 1
5. Add line in between each column text. 2
